BRAHMAN CROSS (BX) CATTLE BREEDING BUSINESS SISKA MODEL 500 COWS

To start a Brahman Cross (BX) cattle breeding business using SISKI (Sistem Integrasi Sapi-Sawit – Palm Oil-Cattle Integration System) model with a herd of 500 cows and 25 bulls will require an initial investment of IDR 10.851 billion and estimated grazing area of 2,500 ha. The business is projected to be cash flow positive in the fourth year. During the first four years of operation, the business will require additional operational expenditure of IDR 10.151 billion and additional capital expenditure of IDR 166 million. Total capital needed before achieving cash-flow positive condition amounts to IDR 14.947 billion. Considering the terminal value of herd closing stock, the Internal Rate of Return (IRR) is projected to be 11.86% in year 10 with a cumulative cash surplus of IDR 18.809 billion and Net Present Value (NPV) IDR 1.681 billion.

1. Summary of Investment

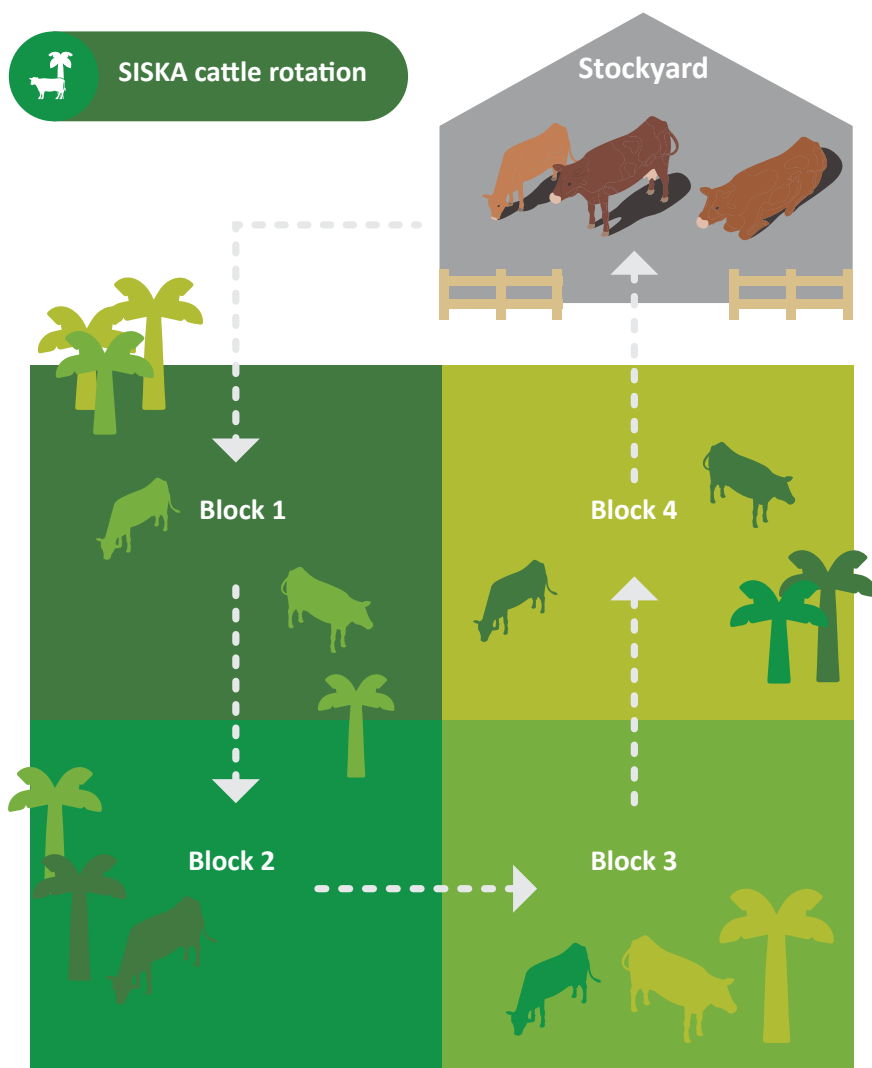

Business Development	Economic Calculation
Duration of operation 10 (ten) years	Initial capital investment required IDR 10.851 billion
Herd size <ul style="list-style-type: none"> • 500 (five hundred) cows • 25 (twenty five) bulls 	Positive cash flow in year 4
SISKI (Sistem Integrasi Sapi-Sawit – Palm Oil-Cattle Integration System) model with natural mating system	Maximum investment before cash flow positive amounts to IDR 14.947 billion (includes investment and operational costs)
Required grazing area at initial phase is 2,500 ha and gradually increase to 4,000 ha in year 10	Cumulative surplus cash flow in year 10 IDR 18.809 billion
Potentially selling 1,549 head of progeny	Including the terminal value of herd closing stock, NPV (Net Present Value) in year 10 IDR 1.681 billion and IRR (Internal Rate of Return) reaches 11.86%
At the end of year 10, number of cows increase to 548 head with the total herd of 1,248 head	

This prospectus provides a financial summary for the integration of commercial cattle breeding into an oil palm operation in Kalimantan or Sumatera. It assumes that cattle will be managed professionally and with a commercial approach to production. It is not relevant to smallholder cattle production systems. Costings and assumptions are based on applied research conducted by the Indonesia-Australia Commercial Cattle Breeding Program from 2016 to 2020. Additional information on commercial cattle breeding in Indonesia is available on www.iaccbp.org and on www.redmeatcattlepartnership.org

spreadsheet's calculation

2. 2. Cattle Breeding Business Operations in the Palm Oil Plantation¹

Cattle in the stockyard every 3 months

- A certain number of cattle herd (a colony) is rotationally grazed in the plantation's blocks (rotational grazing) using a cell system rounded with electric fencing set. One full cycle of rotational grazing is approximately 90 days.
- Every 3 months the cattle is returned to the cattle yard/pen for pregnant test, weighing, weaning, progeny selection, cattle selection for sale etc. For certain case, cattle is brought back to cattle yard/pen for special treatment such as isolation or quarantine.
- The estimated values of hectares required for grazing in year 1 is 2,500 ha and gradually increase to 4,000 ha in year 10. This assumption is calculated annually, based on the projected number of adult cattle and multiplied by the estimated required grazing area per head.²

¹ See more details in IACCB Commercial Cattle Breeding Manual. Free download in www.iaccbp.org and www.redmeatcattlepartnership.org

² See more details Annex 4. The estimated values of hectares required for grazing

3. Initial Capital Investment Required

No	Category	Qty	Unit	Price/unit	Total
1	Cattle Purchase				
	Breeding Females (Cows)	500	head	IDR 18,500,000	IDR 9,250,000,000
	Breeding Bulls	25	head	IDR 25,000,000	IDR 625,000,000
2	Breeding Center				
	Cattle Yard	1,000	m2	IDR 200,000	IDR 200,000,000
	Pen	300	m2	IDR 200,000	IDR 60,000,000
3	Ranch and Office Equipment				
	Electrifying fencing	1	set	IDR 300,000,000	IDR 300,000,000
	Cattle crush, digital weighing scale etc	1	set	IDR 130,000,000	IDR 130,000,000
	Water/electricity Installation	1	set	IDR 10,000,000	IDR 10,000,000
	Other ranch equipment and tools	1	set	IDR 10,000,000	IDR 10,000,000
	Office equipment	1	set	IDR 10,000,000	IDR 10,000,000
	Mini truck	1	unit	IDR 180,000,000	IDR 180,000,000
4	Pasture Preparation				
	Ploughing, cuttings purchase, fertilizing, sowing etc	8	ha	IDR 9,600,000	IDR 76,800,000
TOTAL					IDR 10,851,800,000

The initial capital investment³ required is IDR 10.851 billion with the following details:

- 500 (five hundred) cows with weight around 380-400 kg
- 25 (twenty five) 450-500 kg bulls
- Cost for cattle yard 1,000 m2 (include *cattle race/gang way* and *loading/unloading ramp*) and pen 300 m2 (include handling/calving pen)
- Buying 1 (one) set of import brand electric fencing for *rotational grazing*⁴
- Buying 1 (one) set of equipment and supplies include import made cattle crush, digital scale, feed throughs and other equipment as well as electricity/water Buying 1 (one) set of equipment and supplies include import made cattle crush, digital scale, feed throughs and other equipment as well as electricity/water installations
- Buying 1 (one) unit of used mini truck for transporting feed/water, electric fencing, cattle and other purposes
- Pasture preparation for additional forage in the area of 8 ha, the costs include ploughing, seeds/cuttings purchasing, fertilizing and sowing⁵

³ The initial investment value may vary depending on cattle purchasing price, type of infrastructure materials or quality of equipment.

⁴ Usually the electric fencing set consist of reel geared, tester faultfinder, energizer, solar panel with mounting kit, lead connector single, earth rod and clamp, reel stand, treadin steel dan battery. Number of items, its specification and price may vary, depend on the brand and supplier. The quantity of electric fencing set can also be added or lessed, based on the geographic condition of the plantation and number of herd colonies

⁵ The additional area required for forage plantation is explained is section 6. Daily Operational Cost. The detailed calculation can be seen in Annex 3. The estimation of required additional area for producing forage

4. Monthly Operational Costs

No	Category	Qty	Unit	Price/unit	Total
1	Labour (person/month)				
	Manager	1	person	IDR 15,000,000	IDR 15,000,000
	Paramedic	1	person	IDR 6,000,000	IDR 6,000,000
	Stockmen	10	person	IDR 5,000,000	IDR 50,000,000
	Administration staff	1	person	IDR 5,000,000	IDR 5,000,000
2	Utilities (water/electricity) etc	1	month	IDR 1,000,000	IDR 1,000,000
3	Pen/Cattle yard repair and maintenace	1	month	IDR 2,500,000	IDR 2,500,000
4	Vehicle repair and maintenance	1	month	IDR 2,500,000	IDR 2,500,000
5	Transportation and fuel	1	month	IDR 3,000,000	IDR 3,000,000
6	Others	1	month	IDR 1,000,000	IDR 1,000,000
TOTAL					IDR 86,000,000

- Estimated monthly operational costs⁶ during the first year is IDR 86 million with an assumption of 3% yearly increase
- Monthly operational costs comprised of:
 - o Labour cost of 13 workers. In year 1, the workers are 1 Ranch Manager, 1 Paramedic, 1 Administration staff and 10 Stockmen⁷ who manage herd in 2 (two) colonies, those include feed/water providers and caretaker of feed warehouse⁸.
 - o Overhead cost for pens repair/maintenance, pen utilities, vehicle operations and other costs

5. Other Annual Operational Costs

No	Category	Qty	Unit	Price/unit	Total
1	Animal health services (medicine, vitamins etc)	545	head	IDR 25,000	IDR 13,612,500
TOTAL					IDR 13,612,500

Beside the above monthly operational costs, there is an annual animal health related costs include medicines, vitamins and other health services.

The animal health cost is assumed IDR 25,000/hd/year and increase 3% yearly. This is categorized as a variable cost and calculated based on the average number of the herd stock in the respective year.

⁶ The estimated operational cost may vary depending on animal health costs, number of workers during the initial stage, workers' wages and overhead costs components

⁷ From year 2 onwards, the number of stockmen is automatically calculated with a ratio of 1:100 (one stockman can manage 100 head of cattle). Number of workers and the ratio could be adjusted based on the company's need and ability

⁸ A colony is a number of cattle which are grazed is one location. For this simulation, 1 (one) colony in year 1 is similar with 250 head.

6. Daily Operational Cost

No	Category	Cost/hd/day	
1	Feed Intake Cows		
	Grazing	IDR	6,000
	Pen	IDR	8,000
2	Feed Intake Growers		
	Grazing	IDR	5,000
	Pen	IDR	7,000

Daily operational costs⁹ include feed cost for cows and growers, which consists of forage, concentrate and mineral supplementation¹⁰.

See the details below:

- The average feed intake costs for cows (concentrate supplement) that are grazed in the plantation is IDR 6,000/head/day, and for cows that are in the pen (during specific treatment) is IDR 8,000/head/day.¹¹
- The average feed intake costs for growers (concentrate supplement) that are grazed in the plantation is IDR 5,000/head/day and for growers that are in the pen (during specific treatment) is IDR 7,000/head/day.¹²
- 95% of total herd is assumed grazed in the plantation, and 5% is in the pen for specific treatment
- To fulfill the required quantity for forage that consumed by the cattle that are treated in the pen, it requires additional 8 ha of an empty area for producing the forage.¹³
- It is assumed that feed costs will increase by 0.5% every year.

⁹ Feed cost may vary depending on the feed composition, percentage of feed material required, percentage of dry matter in the commodities used, and feed materials price

¹⁰ Mineral supplementation comprised of DCP (Dicalcium Phosphate or dicalcium phosphate), ZA (zwevelzure ammoniac or ammonium sulphur) and salt

¹¹ See more details Annex 1. Feed Composition Daily Concentrate Supplement of Cows. Feed commodities composition and its price may vary, depends on the availability in each region. Changes in feed composition will affect cows body weight. Occasionally additional forage are also provided to the cattle in the grazing area

¹² See more details Annex 2. Feed Composition Daily Concentrate Supplement of Growers. Feed commodities composition and its price may vary, depend on the availability in each region. Variation in feed composition will affect growers body weight. The intake volume is an average and adjusted based on the weight of growers. Occasionally additional forage are also provided to the growers in the grazing area

¹³ See more details Annex 3. The estimation of required additional area for producing forage

Bulls : Cows Ratio	6%	5%	5%	5%	5%

- The initial cattle investment is 500 cows and 25 bulls
- The estimated number of calved cows in year 1 is only 10% or 50 head from total 500 head of cows. The progeny is assumed to be 50% (fifty percent) male and 50% (fifty percent) female. From year 2 onwards, the estimated calving rate is 70% per year.
- The assumption of calves mortality rate is 10%
- Starting year 2, every year the unproductive cows which are 10% of total cows will be sold
- The unproductive bull will also be sold starting year 2 (1 head/year). To keep the bulls ratio of 5% (1 bull : 20 cows), 3 new productive bulls will be purchased every 2 years starting year 4.
- The half of female progeny will be sold at age 18 months (50%) and the other half will be retained, grown up as cows. The sales of female progeny is started in year 3.

- All male progeny is sold at age 24 months and the sales is started in year 3
- Total cattle sales within ten years will be 518 head (five hundred eighteen) of female progeny with average weight of 292 kg¹⁴ , 1,031 (one thousand thirty one) of male progeny with average weight of 374 kg¹⁵ , 418 (four hundred eighteen) culled cows with average weight of 450 kg and 9 (nine) culled bulls of approximately 500 kg live weight.
- Closing stock in year 10 will be 1,248 (one thousand two hundred forty eight) head.

¹⁴ Estimated ADG (Average Daily Gain) of female progeny after weaning from 4-18 months old is 0.45 kg. The assumption of weight increase is by consuming forage in the plantation and consuming additional intake of concentrate supplement as can be seen in Annex 2. Feed Composition Daily Concentrate Supplement of Growers. ADG may vary, depend on the feed quality and quantity.

¹⁵ Estimated ADG (Average Daily Gain) of male progeny after weaning from 4-24 months old is 0.45 kg. The assumption of weight increase is by consuming forage in the plantation and consuming additional intake of concentrate supplement as can be seen in Annex 2. Feed Composition Daily Concentrate Supplement of Growers. ADG may vary, depend on the feed quality and quantity.

Cash flow Projection Analysis

ROI (Return on Investment)	144.37%
IRR (Internal Rate of Return)	11.86%
Cumulative Cash Flow	IDR 18,809,504,845
NPV (Net Present Value)	IDR 1,681,840,615
Positive Cash Flow	Year 4
PBP (Pay Back Period)	Year 10

9. Cash Flow Projection Analysis

- Source of revenue:
 - (1) All female progeny sales at age 18 months old
 - (2) All male progeny sales at age 24 months old
 - (3) Culled cow sales
 - (4) Culled bull sales.
 - (5) Other revenues, include the benefits to palm oil plantation such as the savings of weeding costs and the savings of organic fertilizing costs
- It is assumed that selling price¹⁶ of 2 years old male growers is IDR 50,000/kg live weight (app. 374 kg) and 18 months female growers is IDR 43,000/kg live weight (app. 292 kg). Meanwhile, cows selling price with an average live weight of 450 kg is approximately IDR 39,000/kg and a culled bull weighing around 500 kg is IDR 40,000/kg. The selling price is assumed to increase by 0.5% per year
- Within ten years, 1,549 progeny, 427 culled cows and culled bull are sold with total revenue IDR 34.503 billion.
- Beside the cattle sales, the other revenues are coming from the savings of weeding costs and the efficiency in organic fertilizing costs which are calculated starting year 3 onwards. The estimated savings of weeding costs is IDR 80,000/ha and the efficiency from organic fertilizing is IDR 250,000/ha then those are multiplied by the initial grazing area of 2,500 ha. The other revenues are assumed 3% increase yearly. In year 10, the total of other revenues reach IDR 7.782 billion.
- Final stock in year 10 will be 1,248 head and the estimated cattle terminal value will be IDR 18.829 billion
- Total investments over ten years, including the cattle purchased and recondition of its infrastructure is IDR 11.571 billion.
- Total estimated operational costs over ten years- including feed, health service, labour costs and other overhead costs are around IDR 30.734 billion.
- Projected cumulative cash flow at the end of year 10 is surplus IDR 18.809 billion.
- Based on the analysis, positive cash flow can be achieved in year 4. Pay back period will be obtained in year 10.
- Taking into account the terminal value of herd closing stock, IRR (Internal Rate of Return) in year 10 will reach 11.86% and ROI (Return on Investment) 144.37%.

¹⁶ Selling price/kg varies per region and is depending on sale time. Selling price has significant impact on the revenue

10. BX Cattle Breeding Business Risks

In order to run the business as planned, you should always pay attention to and maintain the cattle productivity performance parameters, including:

Body Condition Score: Always maintain BCS (Body Condition Score) of Cows in ideal condition ≥ 3 . Non-ideal BCS will reduce reproductive ability of the cows.

Average Daily Gain: Maintain ADG (Average Daily Gain) of weaned calves to meet the targeted weight. Lower ADGs will impact final weight of sales cattle.

Cattle mortality rate including abortion and still birth.

Abortion and still births will affect the number of calves born. Calf death rate will affect the number of growers and finished cattle for sale. Meanwhile, cow and bull deaths will reduce the calving rate and increase the cost of purchasing new cattle for replacement,

Cull unproductive cows. All cows that failed to conceive within the targeted period and not immediately culled (sold) can potentially increase feed cost. Delay in culling and replacing unproductive cows with new pregnant cows extend the calving interval and reduce the calving rate

Annex 1. Feed Composition Daily Concentrate Supplement of Cows

Commodity	Grazing			Pen		
	Volume /hd	Price /kg	Costs	Volume /hd	Price /kg	Costs
Palm Kernel Cake	2.50 kg	IDR 1,000	IDR 2,500	4.50 kg	IDR 1,000	IDR 4,500
Dedak	0.20 kg	IDR 4,200	IDR 840	0.20 kg	IDR 4,200	IDR 840
Onggok	0.20 kg	IDR 5,000	IDR 1,000	0.20 kg	IDR 5,000	IDR 1,000

Direct Cost of Feed Provision*			IDR 1,000			IDR 1,000
Total Costs			IDR 4,594			IDR 7,014
Rounded			IDR 5,000			IDR 7,000

* Direct cost of feed provision consist of fuel cost for feed logistic and casual labor costs. This cost is averagely calculated per head per day.

Annex 3. The estimation of required additional area for producing forage

	Cows	Growers
Average liveweight	450 kg	280 kg
% DM required in feed (of live weight)	2.5%	2.5%
DM/hd/day required	11.3 kg	7.0 kg
Forage		
% forage required	80%	80%
DM required from forage/head/day	9.0 kg	5.6 kg
% DM	25%	25%
Forage required /head/day (rounded)	36 kg	22 kg

DM=Dry Matter

FM= Fresh Matter

The average weight of cows is assumed 450 kg/head and the needs of Dry Matter (DM) /head/day is 2.5% of the weight or 11,3 kg/head/day. The required DM of Forage is 80% of Total Feed or 9.0 kg. If % DM Forage is 25% then the requirement for Fresh Matter (FM) of Forage is circa 36 kg per head/day.

The average weight of growers is assumed 280 kg (average weight from weaning age to the age at sale). Using similar formula, the growers require DM Forage 5,6 kg or FM Forage 22 kg per head/day

Forage's harvest result (DM)	
Forage's harvest result FM /ha/year	100,000 kg
% DM Forage	25%
Production of DM Forage /ha/year	25,000 kg
(% palatable)	85%
Avg. Forage's harvest result DM /ha/year	21,250 kg

Assumption of forage's harvest result (King Grass) per ha/year is 100 ton. With 25% of DM Forage, the production of DM Forage is 25 ton per ha/year. If only 85% is palatable, the average harvest result of DM Forage is 21.250 ton /ha/year.

	Avg./year
No. of herd in the pen (5% of avg. total herd)	
Cows and Bulls	30 hd
Growers	30 hd
DM Forage required over 1 year	
Cows and Bulls	99,191 kg
Growers	61,095 kg
Total	160,286 kg
Required Area for Forage Plantation	7.5 ha
Rounded Area	8 ha

From total herd per year, it is assumed that only 5% is in the pen for specific treatment. After a rounded calculation, in average there are circa 30 cows-and-bulls and 30 growers in the pen/year. Multiplied by 9 kg for cows and 5,6 kg for growers, it requires 160 ton DM Forage/year. If the annual requirement of 160 ton divided by the forage's harvest result of 21 ton/year, it needs additional 8 ha of an empty area (rounded) to plant additional forage to feed the 5% of the herd in the pen.

Assumption	Unit / Price
Forage plantation area	8 ha
Initial Investment (/ha)	
Cuttings purchase costs King Grass /ha	IDR 4,800,000
Ploughing costs /ha	IDR 2,500,000
Fertilizing costs /ha	IDR 1,300,000
Sowing costs /ha	IDR 1,000,000
Operational costs /cycle/ha	
Fertilizing costs /ha	IDR 1,300,000
Application costs /ha	IDR 200,000

The estimated value of investment for 8 ha is IDR 9.6 million per ha, comprises of ploughing cost, purchasing cost for King Grass' cuttings, fertilizing and sowing.¹⁷ The assumption for yearly operational costs are for fertilizing cost and application costs 2 times per year or in total IDR 1.5 million per cycle /ha and is assumed 3% yearly increase.

¹⁷ 8 ha requires +/- 32,000 King Grass' cuttings with the price of IDR 150/cutting. The assumption of planting distance for King Grass is 40 cm (in row) x 80 cm (between rows). In a 1 ha of 100 m x 100 m, there are 250 cuttings and for between rows there are 125 cuttings = 31,250 cuttings (rounded to 32,000 cuttings). The assumption of required fertilizer is 200 kg x IDR 6,500/kg. The cost, price and application varies per region and geographic condition

Annex 4. Estimated Annual Requirement of Feed and Land

	Year 1	Year 2	Year 3	Year 4	Year 5
Projected no of adult cattle /year	520 hd	509 hd	735 hd	737 hd	741 hd
Estimated required grazing area /hd	4 ha	4 ha	4 ha	4 ha	4 ha
Estimated required grazing area	2,080 ha	2,036 ha	2,940 ha	2,948 ha	2,964 ha
Estimated required grazing area (rounded)	2,500 ha	2,500 ha	3,500 ha	3,500 ha	3,500 ha

	Year 6	Year 7	Year 8	Year 9	Year 10
Projected no of adult cattle /year	779 hd	810 hd	838 hd	868 hd	904 hd
Estimated required grazing area /hd	4 ha	4 ha	4 ha	4 ha	4 ha
Estimated required grazing area	3,116 ha	3,240 ha	3,352 ha	3,472 ha	3,616 ha
Estimated required grazing area (rounded)	3,500 ha	3,500 ha	4,000 ha	4,000 ha	4,000 ha
